Tenet

AI governance for K-12 schools

FOR SUPERINTENDENTS · TENET EDGE

Your AI policy should work where AI is used.

Students need to do the thinking. Families need their children's information protected. Teachers need their rules to follow the class. Tenet puts your district's AI policy into practice inside existing AI tools.

From a written policy to everyday practice.

DISTRICT

AI POLICY

- Students create their own work.
- Protect personal information.
- Use AI within school rules.

→ **Tenet** →

- ✓ AI coaches. Students think.
- ✓ Names and emails are stripped.
- ✓ School rules remain active.

Tenet applies district guidelines and teacher instructions on managed devices.

LEARNING

Give teachers real control.

Classroom rules change by teacher, subject, and period. Take-home rules extend that guidance to homework.

PRIVACY

Guard against PII leakage.

Protect personally identifiable information in prompts and local files. On-device checks strip student names and emails before AI receives them.

OVERSIGHT

Act on the right evidence.

Local classifiers and District session review enforce rules during use. Designated staff receive AI-vendor crisis signals for human follow-up.

Choose the scope your schools need.

Basic provides one district baseline. District adds roster-aware privacy, teacher and classroom rules, schedule context, and student session review. Small schools need these controls, too.

Keep control of district records.

Routine Edge conversations stay off TrueMadeAI's product backend. District-controlled storage holds configured analytics and incident evidence, with access and retention decisions owned by your district.

Tenet: plan a pilot around one classroom need, one staff workflow, and the privacy and safety process your district will use.

INSIDE THE AI TOOLS YOUR SCHOOLS ALREADY USE

ChatGPT · Claude · Gemini · Microsoft Copilot

Grok · MagicSchool · SchoolAI · Brisk Boost

Make your district's AI policy visible in practice.

* Tenet is an AI governance platform for managed Chrome. District adds classroom context and session review. General analytics exclude raw conversation content; configured incident evidence can include text and identifying context. School staff retain safety-response responsibilities. View current workflow coverage.
